Capability statement

Industrial supply and factory control from China for international project buyers

What Sinospect does

Sinospect Industrial Company Limited.

Sinospect sources, quality-controls and delivers industrial equipment from China. Since 2004. The firm supplies industrial materials and equipment from qualified Chinese manufacturers to international EPC teams, industrial buyers and project developers. Supplier qualification, technical review and factory-side quality control are built into the order. Buyers that contract a manufacturer directly can commission the same controls separately.

Under the standard supply model, the buyer contracts with and receives the invoice from Sinospect. Deposits or verified production milestones may be paid earlier; the factory's final balance remains conditional on the agreed QC or FAT gate. Delivery, import and site-support responsibilities are defined in each proposal.

Operating presence

Operating offices

Hong Kong	Company office and commercial coordination.
Ningbo, Zhejiang	Operations office for manufacturer follow-up, inspection scheduling and document control across Chinese production regions.

Project-based coordination

Morocco-based coordination is available when the agreed project scope requires regional follow-through.

Buyer markets

International. Destination-country requirements and delivery responsibilities are agreed project by project.

Core capabilities

- Industrial materials and equipment supply from qualified Chinese manufacturers
- Supplier identity, capacity and technical qualification before award
- Quotation, specification, drawing and bill-of-material review
- Production follow-up, pre-shipment inspection and factory acceptance testing
- Technical-document, certificate and corrective-action control
- Packing, consolidation and shipment-readiness coordination
- Warranty follow-up, spare parts and supplier continuity after delivery

Three engagement routes

1. Sinospect supplies the order

Sinospect is the contracting supplier and invoicing counterparty. It qualifies and contracts the factory, controls the agreed China-side gates and coordinates the delivery scope stated in the proposal. The buyer retains the specification, deviation approvals, design authority and final acceptance.

2. Buyer-direct execution

The buyer keeps the factory contract and payment authority. Sinospect is retained for an agreed China-side scope such as qualification, technical clarification, production follow-up, FAT, PSI or document control.

3. One bounded factory control

The buyer otherwise manages the order and commissions one defined assignment. Authority and deliverables stop at the named scope.

Sectors and packages

- Electrical and energy equipment: transformers, switchgear, generating sets, cabling and storage
- Industrial and process equipment: plastics, packaging, filling, marking and automation
- Construction and facility systems: cleanroom envelope, doors, profiles, flooring and technical systems
- Healthcare production equipment, consumables and destination-specific documentation
- Project-specific equipment lists and multi-factory packages

Documented regional experience

Selected documented experience includes projects in Morocco, Côte d'Ivoire and Kenya. Requirements vary by country, port, contract and trade lane. The supply model serves international buyers under project-specific delivery terms.

Send a BOQ, specification, equipment list or existing quotation to jk@sinospect.com. Sinospect acknowledges the request within one business day and provides a written assessment, or requests missing information, within two business days.
